

Implement as much items as possible. Any extra features are welcomed.

Platform: **Drupal 7**

Result: **source code and SQL dump**

1. Create a Drupal module:
 - 1.1. Module should define a new content type
 - 1.2. Module must use own node templates
 - 1.3. Create a block with last 3 nodes (in code)
 - 1.4. Create a block with last 5 nodes (via **Views**) and export it to your module
 - 1.5. Put block from 1.3. into first sidebar by default
 - 1.6. Create separate templates for nodes with odd and even node ids
 - 1.7. Add link field to your content type in code (use Link module)
2. Integrate your module with Webform:
 - 2.1. Webform module allows to create lists which can be used for Select/Checkboxes/Radios elements. Create new predefined select list with a list of your nodes (check default **Countries** or **Day of week** lists)
3. Integrate with REST services (<https://drupal.org/sandbox/Taran2L/1807378>):
 - 3.1. Create a new resource **/api/my_node** with only one method implemented (index)
4. Integrate your module with Panels
 - 4.1. Create custom Panels pane, that displays last 4 nodes
